European Journal of Clinical Nutrition

Subject index to volume 45, 1991

Adipose tissue, linoleic acid content with age, 195–202
Agro-ecological zones, and xerophthalmia in Ethiopia, 469–478
Alcohol consumption, association with weight gain, 419–430
Amino acids, large neutral, effect on Parkinson's disease of, 263–266
Anaemia, and iron status, in non-pregnant women, 215–220
Anorexia nervosa
  association with CHD risk factors, 33–36
  effect of refeeding on energy metabolism of, 527–537
Anthropometric status, association with sanitary improvements, 23–32
Anthropometry
  of anorectics, 33–36
  of Bangladeshi children, 327–330
  of cerebral palsied children, 479–487
  and nutritional status of the elderly, 281–286
  in physically active and sedentary elderly women, 545–552
  in prediction of nutritional status, 85–95
  of 'stunted' and 'adequately nourished' under-fives, 23–32
  and xerophthalmia in Ethiopia, 469–478
Apolipoprotein
  A1, as an index of protein-energy malnutrition, 511–514
  B, levels in anorexia nervosa, 33–36

Basal metabolic rate
  in chronic undernutrition, 363–373
  in determining minimum energy intakes, 569–581, 583–598
  predictive equations for, in tropical peoples, 177–185
Biochemistry, and nutritional status of the elderly, 281–286
Birth weight, as predictor of nutritional status, 85–95
Bitot's spots, and xerophthalmia in Ethiopian children, 469–478
Blood glucose
  response to bread intake in insulin-dependent diabetics, 97–103
  response to sweeteners in NIDDM patients, 561–565
Blood lipids, influence of fish oils on, in CHD patients, 209–213
Blood pressure
  and Dutch dietary guidelines, 431–439
  effects of *trans* fatty acids on, 375–382
  levels in anorectics, 33–36
Body composition
  assessment by bedside techniques, 43–49
  changes of, in anorectic girls, 527–537
  and inter-observer variability in measurement of, 43–49
Body impedance, correlation with weight loss during dialysis, 321–325
Body mass index
  and nutritional status of the elderly, 281–286
  variation with age in French population, 13–21
Breast-feeding, duration of, and contraceptive use, in rural Bangladesh, 341–346
Breast-milk
  calcium and phosphorus concentrations in Zaïre mothers, 609–614
  fluoride level correlations with mother's age and weight, 37–41
Breast-milk intake
  and body weight, in Myanmar infants, 203–207
  in Indonesian infants, 67–75
  measurement of, by deuterium dilution method, 121–129
  and relation to growth, 77–84

Calcium, concentration of, in breast-milk, 609–614
Calcium supplements
  effects on urinary calcium and hydroxyproline excretion, 357–361
  and estimation of calcium absorption in healthy women, 117–119
  sodium content of, 117–119
Carbohydrate absorption, efficiency of, with meal frequency, 221–231
Cholesterol
  effect of Dutch dietary guidelines on serum levels, 431–439
  LDL, plasma levels lowered by linoleic acid, 315–320
  lowering of serum levels by fibre supplementation, 105–110
  variation of plasma levels, 463–468
Cholesterol excretion, effect of dietary fibre on, 451–457
Chronic energy deficiency, grading of, 363–373
Coeliac patients, adult, stature of, 145–149
Colonic fermentation, and meal frequency, 221–231
Conjunctival impression cytology, and vitamin A status, 407–411
Contraceptive use, and breast-feeding duration in rural Bangladesh, 341–346
Copper, intestinal absorption and endogenous losses of, in zinc-deprived men, 187–194
Coronary heart disease, and influence of fish oils on blood lipids, 209–213
Cytokines, effects on inflammation of, 413–417

Dairy products, and iron absorption, 553–559
Deuterium dilution method
  dose-to-mother, for measurement of breast-milk intake, 121–129
  dose-to-child, for determination of deuterium dilution space and total daily water intake, 121–129

Diabetics
insulin-dependent
glycaemic responses to types of bread, 97–103
non-insulin-dependent
effects of chocolates on postprandial metabolism of, 561–566
hedonic responses to sweet and fatty foods, 393–400
Dialysis, body impedance measurements during, 321–325
Diarrhoea morbidity, and association with sanitary improvements, 23–32
Diet
and disease, criticisms of WHO report on, 615–619
liquid, palatability and intake of, 273–275
therapy, for NIDDM patients, 393–400
variation between socio-economic groups, 441–450
Diet-induced thermogenesis, contribution to 24-hour energy expenditure of, 161–169
Dietary assessment methods, and understimation of energy intake, 583–598
Dietary counselling, long-term effect on nutrient intake and weight loss, in obese children, 287–297
Dietary guidelines, Dutch, influence on health, 431–439
Dietary intakes
availability of energy from, 1–12
in physically active and sedentary elderly women, 545–552
Dietary patterns, regional variations of, in British adults, 253–262
Digestible energy
and dietary 'fibre', 1–12
and gross energy intake, 1–12
prediction by equation, 1–12
Doubly-labelled water method, for measurement of energy expenditure, 569–581, 583–598
Draft declaration on food, nutrition and health in Europe, 277–279
Dutch Nutrition Surveillance System, 441–450

Eczema, atopic
and fatty acid metabolism, 501–505
failure of zinc supplementation in, 507–510
Education, influence of, on weight gain in adults, 419–430
Egg, addition to pasta, response to, 489–499
Energy expenditure
and basal metabolic rate, 177–185
contribution of diet-induced thermogenesis to, 161–169
influence of feeding frequency on, 161–169
in muscle, 171–175
within-subjects variation of, over 10 months, 353–356
Energy intake
determining minimum cut-off limits for, 569–581
identifying under-recording of, 569–581
impact of feeding problems on, in cerebral palsy, 479–487
evaluation of published surveys on, 583–598
Energy metabolism
adaptation of, in anorectics, 527–537
and feeding frequency, 161–169
and respiratory quotient, 161–169
Energy percentage of fat, effects of, during fish oil supplementation, 383–392
Energy values of foods, calculation of using empirical formulae, 1–12
Enzymatic evaluation, of riboflavin in infants, 309–313
Excretion
of riboflavin catabolites, 299–307
small bowel
dietary modification of, 451–457
urinary
effect of calcium supplements on, 357–361
effect of dietary guidelines on, 431–439

Faecal energy loss, atypical observations on, 1–12
Fatty acids
trans, effects on blood pressure of, 375–382
types of, in adipose tissue of Scottish adults, 195–202
Feeding frequency
and colonic fermentation, 221–231
and nutrient utilization in man, 161–169
Feeding pattern, longitudinal study of, in Indonesian infants, 67–75
Feeding problems, in cerebral palsied children, 479–487
Ferritin, variations in serum levels of, and dietary intake, 331–340
Fibre, dietary, effect of, on small bowel excretion of cholesterol, 451–457
Fibre supplementation, for control of hypercholesterolaemia in desert Nomads, 105–110
Fish oil, influence on blood lipids of, in CHD patients, 209–213
Fish oil supplementation, and n-3 PUFA incorporation, 383–392
Flavin excretion, 299–307
Fluoride intake
and breast-milk fluoride levels, 37–41
through breast-milk and complementary foods, 37–41
Food use questionnaire, validity of, 267–272
Fructose, in chocolate, effect on NIDDM metabolism of, 561–566

Glucose, response to pasta and bread products, 489–499
Glutathione, in kwashiorkor, 59–65
Glycine
metabolism of, 59–65
status determination of, using 5-oxoprolinuria, 59–65
supplementation, effect of, 59–65
Gross energy intake, and digestible energy and faecal energy loss, 1–12
Growth
of Bangladeshi children, 327–330
and breast-milk intake of Myanmar infants, 203–207
faltering, onset of, 77–84
impact of feeding problems on, in cerebral palsy, 479–487
relation to breast-milk intake and additional foods, 77–84
retardation in the uterus, and zinc supplementation, 139–144

Hedonic responses, to sweet and fatty foods in NIDDM patients, 393–400
Height
of adult coeliac patients, 145–149
of lacto-ovo vegetarian children and adolescents, 51–58
of Lesotho children and sanitation facilities, 23–32
'High-fibre' diets, for treatment of irritable bowel syndrome, 599–607
Hyper cholesterolaemia, control of, by fibre supplementation in desert Nomads, 105–110
Hydroxyproline, urinary excretion of, in osteoporotic women, 357–361

Illeostomy patients, dietary modification of small bowel excretion in, 451–457
Impedance, body, correlation with weight loss during dialysis, 321–325
Inflammation, effects of cytokines and nutrition on, 413–417
Insulin
effect of suppression of, on postprandial metabolism, 515–526
response to pasta and bread products, 489–499
Inter-observer variability, in measurement of body composition by bedside techniques, 43–49
Intrauterine growth retardation, significant reduction of, by zinc supplementation, 139–144
Iron absorption, with dairy products, 553–559
Iron deficiency, in BMI-depleted elderly, 281–286
Iron status
and dietary considerations, 331–340
in mentally handicapped women, 331–340
in non-pregnant women, 215–220
Irritable bowel syndrome, 'high-fibre' treatment of, 599–609
Isomalt, in chocolate, effect of, on NIDDM metabolism, 561–566

Lactating women, lysine and protein metabolism of, 227–242
Lactation, efficiency of, in Gambian women, 459–462
Large neutral amino acids, influence of supplement of, on Parkinson's disease, 263–266
Latrine ownership, association with height-for-age in under-fives, 23–32
Leukotriene production, effect of energy percentage of fat and P/S ratio on, 383–392
Life-style and diet, variation between socio-economic groups, 441–450
Linoleic acid
adipose tissue concentrations of, related to age, 195–202
LDL-cholesterol-lowering effect of, 315–320
metabolism of, in atopic eczema patients, 501–505
Lipid metabolism, effect of sugar-beet fibre on, in desert Nomads, 105–110
Lipoprotein levels, effect of Dutch dietary guidelines on, 431–439
Liquid diets, palatability and intake of, 273–275
Low-protein diet, efficacy of, in Parkinson's disease, 263–266
Lysine metabolism
in young lactating women, 227–242
multicompartmental analysis of, 227–242

Meat intake, and height attainment in children and adolescents, 51–58
Menstrual iron loss, 331–340
Metabolic control, association of hedonic responses to, in NIDDM patients, 393–400
Metabolizable energy, calculation of, 1–12
Modified relative dose response assay, and vitamin A status, 407–411
Muscular activity, and energy expenditure, 171–175

Near infra-red interactance, and body composition measurement, 43–49
Nutrient intake
assessment of, by food use questionnaire, 267–272
effects of dietary counselling on, in obese children, 287–297
patterns of variability in pregnant Indonesian women, 131–138
Nutrient utilization, diurnal periodicity of, and influence of feeding frequency on, 161–169
Nutrition, effect of, on inflammation, 413–417
Nutritional considerations, in plasma cholesterol variability, 463–468
Nutritional status
apo A1 as index of, 511–514
determination, timing of, 85–95
predicted by birth weight, 85–95
of the elderly, assessment of, 281–286
Nutritional transition, during infancy in East Java, 67–75, 77–84

Obese children, long-term effects of dietary counselling in, 287–297
Obesity, influence of socio-economic factors on, 419–430
Osteoporotic women, effect of calcium supplementation on urinary excretion of, 357–361
5-Oxoprolinuria, use of, as indicator of glycine insufficiency, 59–65

Parasitic effects, on vitamin A levels in Brazilian children, 539–544
Parkinson's disease, dietary modification of, 263–266
Pasta, glycaemic and hormonal responses to, 489–499
Phosphorus, concentration in breast-milk of, 609–614
Physical activity
comparison of, in UK and Gambian children, 243–252
at leisure, and weight gain, 419–430
and nutritional status in elderly women, 545–552
Physical activity level, use of, in determining minimum energy intakes, 569–581, 583–598
Pregnancy
effects of zinc supplementation during, 139–144
premature membrane rupture during, 401–405
Pregnant women, variability in nutrient intake of, in Indonesia, 131–138

Protein-energy malnutrition, diagnosis by apo A1, 511–514
Protein intake, and vitamin B_6 status in Nigerian adolescents, 111–115
Protein metabolism
  and insulin metabolism, 515–526
  in young lactating women, 227–242
PUFA incorporation, effect of energy percentage of fat and P/S ratio on, 383–392
Pulse rate, levels in anorexia nervosa, 33–36

Riboflavin
  in breast-milk, 309–313
  status of, in infants, 309–313
  effects of supplementation on urinary catabolites of, 299–307
Rural Sanitation Pilot Project, health impact, evaluation of, in Lesotho, 23–32

Salt, total and domestic consumption of, in Italy, 151–159
Sanitation facilities, and height attainment in children, 23–32
Serum ferritin, variations with dietary intake, 331–340
Serum lipids
  influence of fish oils on, in CHD patients, 209–213
  levels of anorexia nervosa, 33–36
Socio-demographic conditions, effect on growth of Bangladeshi children, 327–330
Socio-economic status, related to diet and life-style, 441–450
Sodium, total and discretionary intake of, in Italy, 151–159
Sodium content, of five proprietary calcium supplements, 117–119
Sodium excretion, effect of dietary guidelines on, 431–439
Somatostatin, and insulin suppression, 515–526
Starch hydrolysis, in pasta digestion, *in vitro*, 489–499
Sterol excretion, from small bowel, dietary modification of, 451–457

Trans fatty acids, effects on blood pressure of, 375–382

Unavailable complex carbohydrates
  energy value of, 1–12
  intakes of, in mixed diets, 1–12
Urea kinetics, longitudinal variation of, 347–351
Urinary riboflavin catabolites, effects of riboflavin supplementation on, 299–307

Vegetarian diet, and child growth, compared to meat-eating, 51–58
Vitamin A
  influence of enteral parasites on blood levels of, 539–544
  and retinol/zinc supplementation, 539–544
Vitamin A deficiency, and xerophthalmia in Ethiopia, 469–478
Vitamin A status, assessed by MRDR and CIC, 407–411
Vitamin B_6 status, and protein intake in Nigerian adolescents, 111–115
